

The role of process heat in the German energy system and its share of German natural gas consumption

Figure 1

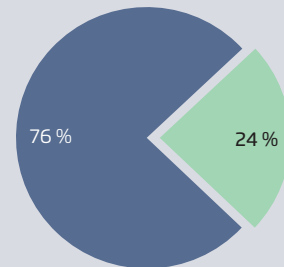

Share of final energy consumption by application area (2020)

Share of process heat energy consumption by source (2020)

Primary energy consumption of natural gas (2020), total 871 TWh

- Process heating
- Water heating
- Space heating
- Cooling applications
- Other

- Mineral oil
- Natural gas
- Electricity
- District heating
- Coal
- Renewables
- Other

- Energetic use in industry
- Other
